

Project Requirements: SnickerSync

Goal: Build a secure, simple differentiating tool that provides quick, clear feedback and has an intuitive user interface.

Non-Goal: Integrate SnickerSync with other platforms besides GiggieGit in first release.

Non-Functional Requirements:

1. Access Control

- **Functional Requirement 1:** Implement role-based access control to differentiate between user types (like admin, view-only, editor).
- **Functional Requirement 2:** Allow project managers to assign and manager user permissions.

2. Concept Management

- **Functional Requirement 1:** Provide an interface for PMs to create, edit, and delete snickering concepts.
- **Functional Requirement 2:** Enable version control of snickering concepts to track changes over time.

Agile

Theme: Get GiggieGit demo into a stable enough alpha to start onboarding some adventurous clients

Epic: Onboarding Experience

User story 1: As a vanilla git power-user that has never seen GiggieGit before, I want to understand what GiggieGit does, so I can decide if it's useful for my work.

Task: Explain GiggieGit's features

Ticket 1: Create an "About" page that explains GiggieGit's main premise and features.

Ticket 2: Add a simple FAQ section answering common questions a new user may experience.

User story 2: As a team lead onboarding an experienced GiggieGit user, I want to be able to easily collaborate the new team member so they can get caught up quickly and we can smoothly manager our code.

Task: Improve team collaboration features.

Ticket 1: Add a feature to easily share repositories with team members

Ticket 2: Enable notifications for updates or changes in shared projects

User Story 3: As a student deciding between using GiggieGit or an alternative, I want to see real-world examples of GiggieGit in action, so I can understand how to apply it to my projects.

Task: Provide practical examples

Ticket 1: Add a page of real-life past client examples of what they used Gigglegit for and include demo projects.

Ticket 2: Have a customer service chat where student can be specific about what they're looking for and learn what features are useful for them.

Non-User Story Question: This is not a user story because it is a functional requirement about a specific feature, not the overall user experience.
